## Outline

- 1 OpenMDAO concepts
- 2 Work on OpenMDAO at DTU
- 3 Work on OpenMDAO at NREL
- 4 FUSED-Wind
- 5 OpenMDAO guided tutorial
- 6 OpenMDAO exercise

# Table of Contents

- 1 OpenMDAO concepts
- 2 Work on OpenMDAO at DTU
- 3 Work on OpenMDAO at NREL
- 4 FUSED-Wind
- 5 OpenMDAO guided tutorial
- 6 OpenMDAO exercise

## OpenMDAO concepts

**Component**

**Driver**

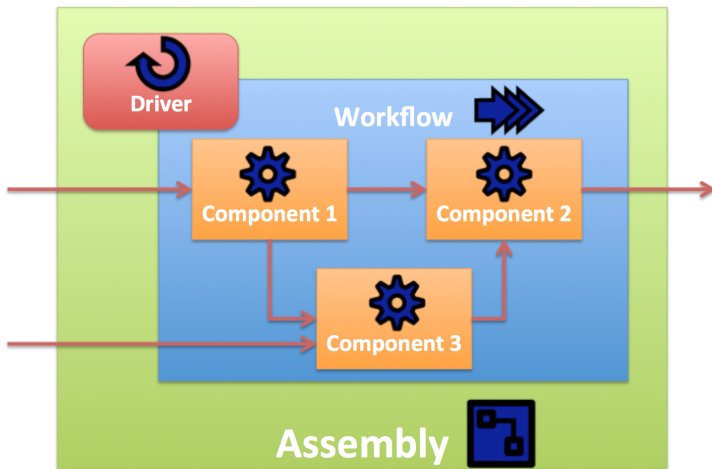

**Assembly**

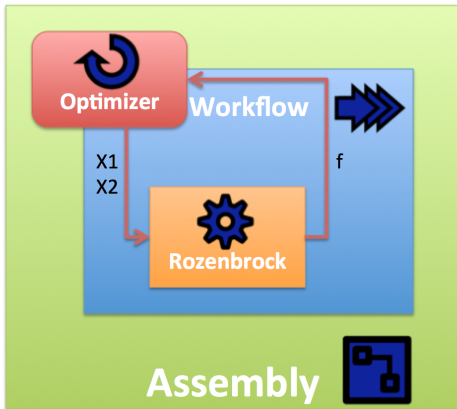

**Workflow**

## In practice

## Example: The Rozenbrock optimization

The Rozenbrock function:  $f = 100(x_2 - x_1^2)^2 + (1 - x_1)^2$

## Component definition

```
class Rosenbrock(Component):  
    """ Standard two-dimensional Rosenbrock function. """  
  
    x1 = Float(iotype='in')  
    x2 = Float(iotype='in')  
    f   = Float(iotype='out')  
  
    def execute(self):  
        """ Just evaluate the function. """  
        x1 = self.x1  
        x2 = self.x2  
        self.f = 100 * (x2 - x1**2)**2 + (1 - x1)**2
```

## Assembly definition

```
class Optimization(Assembly):
    def configure(self):
        """ Configure driver and its workflow. """
        super(Assembly, self).configure()
        self.add('rosenbrock', Rosenbrock())
        self.add('driver', CONMINdriver())
        self.driver.workflow.add('rosenbrock')
        self.driver.add_parameter('rosenbrock.x1',
                                   low=-2, high=2, start=-1.0)
        self.driver.add_parameter('rosenbrock.x2',
                                   low=-2, high=2, start=-2.0)
        self.driver.add_objective('rosenbrock.f')

        # Some additional optimizer options
        #...
```

  

```
opti = Optimization()
opti.run()
```

## Rosenbrock optimization

After a few iterations...

## Different types of Drivers:

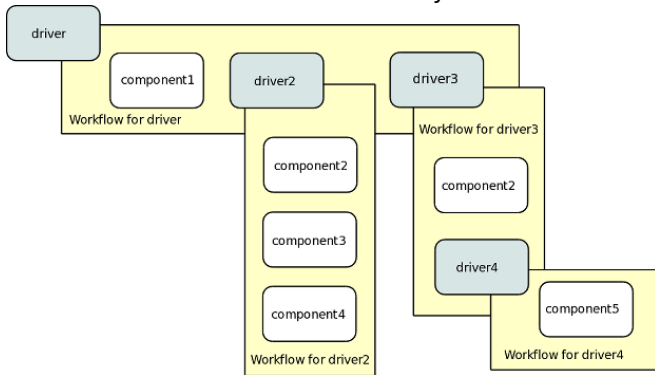

- ◆ Optimizers (support for gradients)
  - ◆ Natives (COBYLA, CONMIN, Genetic, NEWSUMT, SLSQP)
  - ◆ DAKOTA plugin (20+)
  - ◆ pyOpt plugin (10+)
  - ◆ more..
- ◆ CaseliteratorDriver: loop through a list of cases, possibly in parallel
- ◆ Design of Experiment: do parameter studies
- ◆ Sampling. . .

## Different types of variables

- ◆ Array
- ◆ Bool
- ◆ Complex
- ◆ Enum
- ◆ File
- ◆ Float
- ◆ Int
- ◆ Slot
- ◆ Str

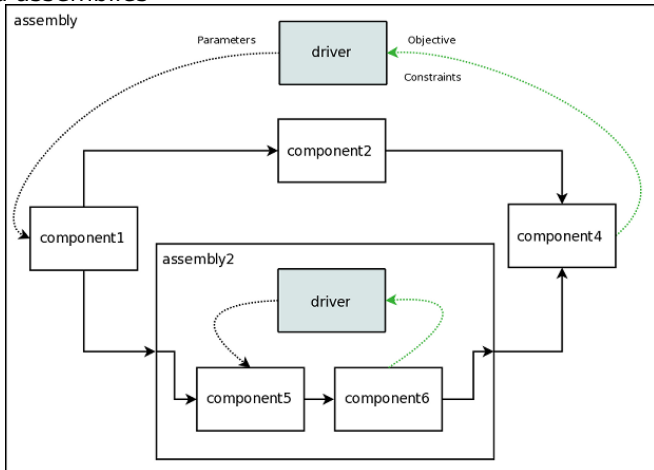

## Different types of Assembly usage (1/2)

Several nested drivers within one assembly

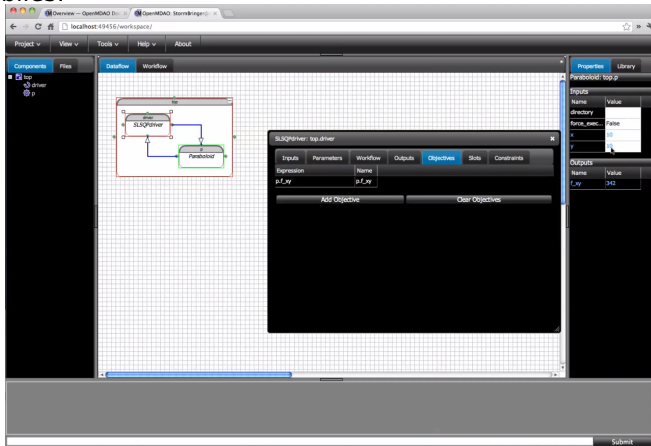

## Different types of Assembly usage (1/2)

### Nested assemblies

# GUI

There is web-based GUI, that you can use to explore your assemblies:

youtube

# Table of Contents

- 1 OpenMDAO concepts
- 2 Work on OpenMDAO at DTU**
- 3 Work on OpenMDAO at NREL
- 4 FUSED-Wind
- 5 OpenMDAO guided tutorial
- 6 OpenMDAO exercise

## Projects (1/3)

### Topfarm (Pierre-Elouan)

#### Wind Farm Layout optimization

- ◆ Wake models (FUSED-Wake)
- ◆ Foundation cost
- ◆ Electrical grid cabling cost model
- ◆ Wind Farm Financial Balance
- ◆ DWM HAWC2 Fatigue database
- ◆ WASP-CFD

## Projects (1/3)

### Topfarm (Pierre-Elouan)

#### Wind Farm Layout optimization

- ◆ Wake models (FUSED-Wake)
- ◆ Foundation cost
- ◆ Electrical grid cabling cost model
- ◆ Wind Farm Financial Balance
- ◆ DWM HAWC2 Fatigue database
- ◆ WAsP-CFD

### FUSED-Wake (Pierre-Elouan)

Framework for analysis of wind farm wake models: N0Jensen, GCL, Ainslie, FUGA, DWM, EllipSys3D AD/AL

- ◆ Uncertainty Quantification
- ◆ Model Averaging
- ◆ Multi-fidelity modelling

## Projects (2/3)

### Light Rotor

- ◆ Wind turbine optimization
  - ◆ aerodynamic (HAWC2 & HAWCStab2) (Frederik, Carlo)
  - ◆ structural (Becas, CSProps) (David, Witold)
- ◆ Airfoil optimization
  - ◆ Aerodynamic (XFoil, EllipSys2D) (Frederik, Franck)
  - ◆ Noise model (TN0, Xfoil) (Franck)

## Projects (2/3)

### Light Rotor

- ◆ Wind turbine optimization
  - ◆ aerodynamic (HAWC2 & HAWCStab2) (Frederik, Carlo)
  - ◆ structural (Becas, CSProps) (David, Witold)
- ◆ Airfoil optimization
  - ◆ Aerodynamic (XFoil, EllipSys2D) (Frederik, Franck)
  - ◆ Noise model (TN0, Xfoil) (Franck)

### Aero-servo-elastic optimization (Carlo's PhD)

HAWCStab2 & HAWC2

## Projects (3/3)

### Ellipsys-HAWC2 coupling

- ◆ Coupling between EllipSys3D fully resolved and HAWC2 (Joachim)
- ◆ Coupling between EllipSys3D Actuator Disc/Line and HAWC2(aero) (Niels T)

### Topology optimization (Alexander)

## Wrapped Codes

- ◆ Operational
  - ◆ EllipSys3D
  - ◆ Becas
  - ◆ HAWC2
  - ◆ HAWCStab2
  - ◆ XFoil
  - ◆ CSProps
- ◆ Under development / Planned
  - ◆ FUGA
  - ◆ DWM-HAWC2
  - ◆ WAsP
  - ◆ WAsP-CFD
  - ◆ WRF
  - ◆ CORWIND
